

# Chalk River

Chalk River is a P2E Western-themed shoot out game where tenderfoots and outlaws compete to see who is the baddest hombre in the West.

The game features both single and multiplayer options, and it's in-game currency is the Vendetta token (\$VDT).

Each player will interact with Chalk River via an ERC-721 NFT. The NFT will represent their character in the game. This character nft will store gameplay data such as accuracy, kills, and current bounty.

As the player moves through the metaverse and gains in-game experience, this stored information becomes increasingly valuable.

## Character NFT Attributes

Vendetta NFTs are ERC-721 tokens running on the Polygon Network. Character nfts store the following gameplay data:

**Speed**

**Bravery**

**Accuracy**

**Luck**

**Regeneration**

**Strength**

## Gameplay Data Capture

We collect and store the following statistical data from the game

Shot Accuracy	Fastest Gun Ranking
Average Draw Speed	Notoriety Level
Number of Kills	Current Bounty
Number of Deaths	Bounties Collected
Shootouts Participated In	Wins/Losses %
Shootout Win/Loss %	Achievements
Current League & Ranking	Mint Date
Chapters Completed	Badassery

# Vendetta Scholarship Platform (VSP)

Asset owners can connect their NFTs to the secure scholarship platform to earn passive income.

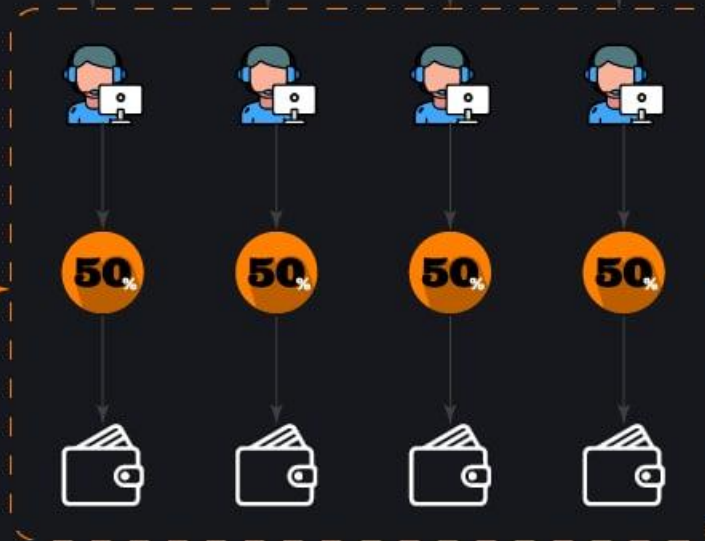

Smart Contract allows scholar to use asset in the game but not remove it from the platform or conduct any transactions.

The VSP leverages live scholar managers, AI, and other technical sounding do dads to keep your assets working around the clock. The platform's sole purpose is to provide a secure mechanism for earn passive income from gameplay.

Scholars can select an asset directly from the platform. The scholar is restricted by a smart contract that only allows to asset to be played in the game, preventing the possibility of losing custody of the NFT.

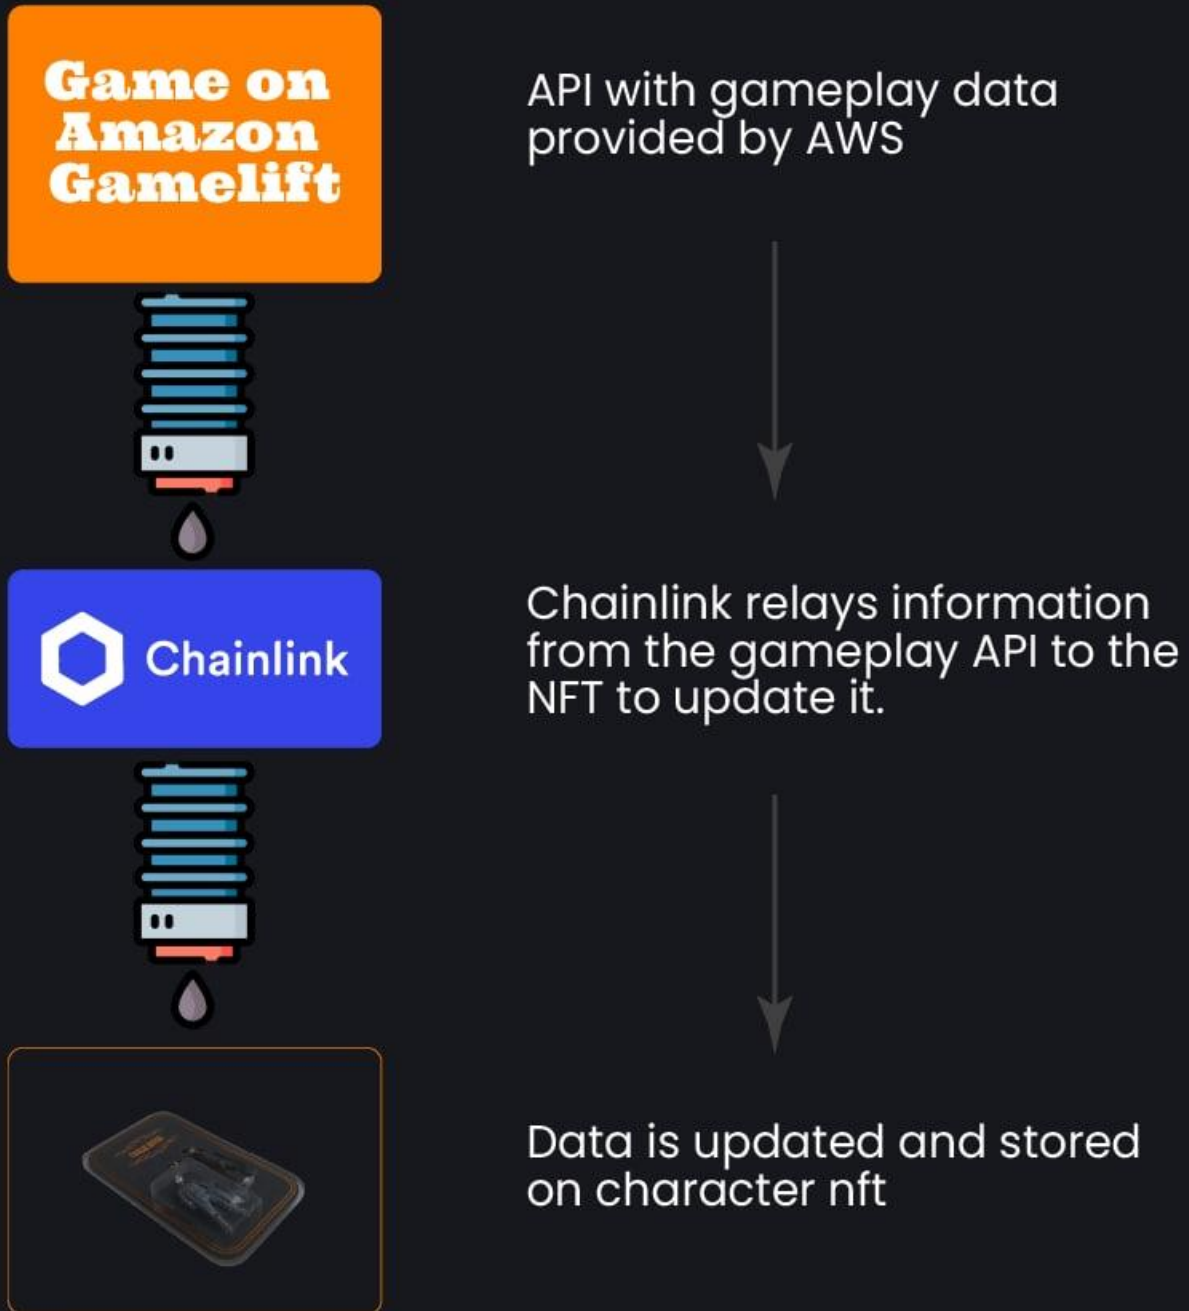

VSP allows asset owners to immediately earn passive income.

We have over 800 applicants to our waiting list to become a scholar. Currently we have over 400 game assets deployed in multiple games.

## How Gameplay Data is Stored On-Chain
